**Vygotsky and Cognitive Science** William Frawley,1997 Is a human being a person or a machine Is the mind a social construction or a formal device It is both William Frawley tells us and by bringing together Vygotsky s sociocultural theory of the mind and cognitive science s computational model he shows us how this not only can but must be To do so Frawley focuses on language particularly on how the computational mind uses language to mediate the internal and the external during thought By reconciling the linguistic device and the linguistic person he argues for a Vygotskian cognitive science Frawley begins by exploding the internalist externalist dichotomy that presently drives cognitive science and falsely pits computationalism against socioculturalism He replaces the reigning Platonic paradigm of computational mind science with a framework based on an unusual unified account of Wittgenstein thus setting the stage for a Vygotskian cognitive science centered on three aspects of mind subjectivity real time operation and breakdown In this context he demonstrates how computational psychology accommodates a critical aspect of Vygotskian theory private speech as the mind s metacomputational regulator An examination of certain congenital disorders such as Williams Syndrome Turner Syndrome and autism that disrupt speech further clarifies the issue of computational and cognitive control

*Toward a Unified Theory of Development* John P. Spencer,Michael S. C. Thomas,James L. McClelland,2009 From William James to Sigmund Freud to Jean Piaget to B F Skinner scholars and parents have wondered how children move from the blooming buzzing confusion of infancy through the tumult of childhood and adolescence into adulthood Does development occur continuously over time or in a series of dramatic stages Is development driven by learning or by biological maturational processes What is the nature of experience and how does it generate change The study of development has always been organized around these big

questions And answers to these questions have a profound influence on daily life forming a framework for how parents think about their own children and influencing both national policy and educational curricula This book defines and refines two major theoretical approaches within developmental science that address the central issues of development connectionism and dynamical systems theory Spencer Thomas and McClelland have brought together chapters that provide an introduction overview and critical evaluation of each approach including three sets of case studies that illustrate how both approaches have been used to study topics ranging from early motor development to the acquisition of grammar They also present a collection of commentaries by leading scholars which offer a critical view from both an outsiders s and an insider s perspective The book is unique in the range of its treatment it begins to delineate how developmental science can incorporate advances within neuroscience and computational modeling and brings the new ideas of connectionism and dynamic systems theory into sharper focus clarifying their usefulness and explanatory power *Handbook of Child*
