Dynamic Graphics Statistics Dynamic Graphics Statistics:

Dynamic Graphics Statistics Cleveland, 1988-07-08 The essential characteristic of a dynamic graphical method is the direct manipulation of elements of a graph on a computer screen which in high performance implementations the elements change virtually instantaneously on the screen This book contains a collection of papers about dynamic graphics dating from the late 1960s to 1988 Although technology has advanced considerably the fundamental ideas about basic graphical principles and data analytic goals are still relevant today *Visual Statistics* Forrest W. Young, Pedro M. Valero-Mora, Michael Friendly, 2011-09-15 A visually intuitive approach to statistical data analysis Visual Statistics brings the most complex and advanced statistical methods within reach of those with little statistical training by using animated graphics of the data Using ViSta The Visual Statistics System developed by Forrest Young and Pedro Valero Mora and available free of charge on the Internet students can easily create fully interactive visualizations from relevant mathematical statistics promoting perceptual and cognitive understanding of the data's story An emphasis is placed on a paradigm for understanding data that is visual intuitive geometric and active rather than one that relies on convoluted logic heavy mathematics systems of algebraic equations or passive acceptance of results A companion Web site complements the book by further demonstrating the concept of creating interactive and dynamic graphics The book provides users with the opportunity to view the graphics in a dynamic way by illustrating how to analyze statistical data and explore the concepts of visual statistics Visual Statistics addresses and features the following topics Why use dynamic graphics A history of statistical graphics Visual statistics and the graphical user interface Visual statistics and the scientific method Character based statistical interface objects Graphics based statistical interfaces Visualization for exploring univariate data This is an excellent textbook for undergraduate courses in data analysis and regression for students majoring or minoring in statistics mathematics science engineering and computer science as well as for graduate level courses in mathematics The book is also ideal as a reference self study guide for engineers scientists and mathematicians With contributions by highly regarded professionals in the field Visual Statistics not only improves a student's understanding of statistics but also builds confidence to overcome problems that may have previously been intimidating **Interactive and Dynamic Graphics for Data Analysis** Dianne Cook, Deborah F. Swayne, 2007-12-12 This book is about using interactive and dynamic plots on a computer screen as part of data exploration and modeling both alone and as a partner with static graphics and non graphical computational methods The area of interactive and dynamic data visualization emerged within statistics as part of research on exploratory data analysis in the late 1960s and it remains an active subject of research today as its use in practice continues to grow It now makes substantial contributions within computer science as well as part of the growing fields of information visualization and data mining especially visual data mining The material in this book includes An introduction to data visualization explaining how it differs from other types of visualization

A description of four toolboxes of interactive and dynamic graphical methods
An approach for exploring missing values in data
An explanation of the use of these tools in cluster analysis and supervised classification
An overview of additional material available on the web
A description of the data used in the analyses and exercises
The book's examples use the software R and GGobi
R Ihaka: it is most often used from the command line; provides a wide variety of statistical methods and includes high quality static graphics
Rarely seen in the Statistics Department of the University of Australia and is now developed and maintained by a global collaborative effort

Handbook of Computational Statistics James E. Gentle, Wolfgang Karl Härdle, Yuichi Mori, 2012-07-06
The Handbook of Computational Statistics: Concepts and Methods second edition is a revision of the first edition published in 2004 and contains additional comments and updated information on the existing chapters as well as three new chapters addressing recent work in the field of computational statistics. This new edition is divided into 4 parts in the same way as the first edition. It begins with How Computational Statistics became the backbone of modern data science. Ch 1: an overview of the field of Computational Statistics: how it emerged as a separate discipline and how its own development mirrored that of hardware and software including a discussion of current active research. The second part: Chs 2-15 presents several topics in the supporting field of statistical computing. Emphasis is placed on the need for fast and accurate numerical algorithms and some of the basic methodologies for transformation, database handling, high dimensional data and graphics treatment are discussed. The third part: Chs 16-33 focuses on statistical methodology. Special attention is given to smoothing, iterative procedures, simulation and visualization of multivariate data. Lastly a set of selected applications: Chs 34-38 like Bioinformatics, Medical Imaging, Finance, Econometrics and Network Intrusion Detection highlight the usefulness of computational statistics in real world applications.

LISP-STAT Luke Tierney, 2009-09-25
Written for the professional statistician or graduate statistics student, the primary objective of this book is to describe a system based on the LISP language for statistical computing and dynamic graphics to show how it can be used as an effective platform for a wide range of statistical computing tasks ranging from basic calculations to customizing dynamic graphs. In addition it introduces object oriented programming and graphics programming in a statistical context. The discussion of these ideas is based on the Lisp Stat system; readers with access to such a system can reproduce the examples presented and use them as a basis for further
