Dynamic Offset Compensated Cmos Amplifiers Analog Circuits And Signal Processing:

Dynamic Offset Compensated CMOS Amplifiers Frerik Witte, Kofi Makinwa, Johan Huijsing, 2009-06-29 *Dynamic Offset Compensated CMOS Amplifiers* describes the theory design and realization of dynamic offset compensated CMOS amplifiers. It focuses on the design of general purpose wide band operational amplifiers and instrumentation amplifiers. Two offset compensation techniques are described: auto zeroing and chopping. Several topologies are discussed with which these techniques can be used in the design of wide band dynamic offset compensated amplifiers. Four implementations are discussed in detail: two low offset wide band operational amplifiers, a low offset instrumentation amplifier, and a low offset current sense amplifier which can sense the current drawn from supply voltages up to 28V. *Dynamic Offset Compensated CMOS Amplifiers* Johan Frederik Witte, 2008

Capacitively-Coupled Chopper Amplifiers Qinwen Fan, Kofi A. A. Makinwa, Johan H. Huijsing, 2016-11-21 This book describes the concept and design of the capacitively coupled chopper technique which can be used in precision analog amplifiers. Readers will learn to design power efficient amplifiers employing this technique which can be powered by regular low supply voltage such as 2V and possibly having a 100V input common mode voltage input. The authors provide both basic design concepts and detailed design examples which cover the area of both operational and instrumentation amplifiers for multiple applications particularly in power management and biomedical circuit designs.

Precision Instrumentation Amplifiers and Read-Out Integrated Circuits Rong Wu, Johan H. Huijsing, Kofi A. Makinwa, 2012-07-25 This book presents innovative solutions in the design of precision instrumentation amplifier and read out ICs which can be used to boost millivolt level signals transmitted by modern sensors to levels compatible with the input ranges of typical Analog to Digital Converters (ADCs). The discussion includes the theory design and realization of interface electronics for bridge transducers and thermocouples. It describes the use of power efficient techniques to mitigate low frequency errors resulting in interface electronics with high accuracy, low noise, and low drift. Since this book is mainly about techniques for eliminating low frequency errors, it describes the nature of these errors and the associated dynamic offset cancellation techniques used to mitigate them. *Current Sense Amplifiers for Embedded SRAM in High-Performance System-on-a-Chip Designs* Bernhard Wicht, 2013-04-17 System on a chip SoC designs result in a wide range of high complexity, high value semiconductor products. As the technology scales towards smaller feature sizes and chips grow larger, a speed limitation arises due to an increased RC delay associated with interconnection wires. Innovative circuit techniques are required to achieve the speed needed for high performance signal processing. Current sensing is considered as a promising circuit class since it is inherently faster than conventional voltage sense amplifiers. However, especially in SRAM, current sensing has rarely been used so far. Practical implementations are challenging because they require sophisticated analog circuit techniques in a digital environment. The objective of this book is to provide a systematic and comprehensive insight into current sensing techniques. Both theoretical and practical aspects are covered. Design

guidelines are derived by systematic analysis of different circuit principles Innovative concepts like compensation of the bit line multiplexer and auto power down will be explained based on theory and experimental results The material will be interesting for design engineers in industry as well as researchers who want to learn about and apply current sensing techniques The focus is on embedded SRAM but the material presented can be adapted to single chip SRAM and to any other current providing memory type as well This includes emerging memory technologies like magnetic RAM MRAM and Ovonic Unified Memory OUM Moreover it is also applicable to array like structures such as CMOS camera chips and to circuits for signal transmission along highly capacitive busses
