Second Edition** Mimi Zeiger, 2000 The specific principles of effective biomedical writing are presented and explained This section by section analysis covers the following the introduction materials and methods results discussion figures and tables references abstract and title Using the Biological Literature Diane Schmidt, 2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries Using the Biological Literature A Practical Guide Fourth Edition is an annotated guide to selected resources in the biological sciences presenting a wide ranging list of important sources This completely revised edition contains numerous new resources and descriptions of all entries including textbooks The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature It covers both print and electronic resources including monographs journals databases indexes and abstracting tools websites and associations providing users with listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date a popular feature continued from the third edition *Writing and Publishing a Scientific Research Paper* Subhash Chandra Parija, Vikram Kate, 2017-07-28 This book covers all essential aspects of writing scientific research articles presenting eighteen carefully selected titles that offer essential must know content on how to write high quality articles The book also addresses other rarely discussed areas of scientific writing including dealing with rejected manuscripts the reviewer's perspective as to what they expect in a scientific article plagiarism copyright issues and ethical standards in publishing scientific papers Simplicity is the book's hallmark and it aims to provide an accessible comprehensive and essential resource for those seeking guidance on how to publish their research work The importance of publishing

research work cannot be overemphasized. However, a major limitation in publishing work in a scientific journal is the lack of information on or experience with scientific writing and publishing. Young faculty and trainees who are starting their research career are in need of a comprehensive guide that provides all essential components of scientific writing and aids them in getting their research work published.

**Writing, Reading, and Understanding in Modern Health Sciences** Milos Jenicek, 2017-07-27. Medical articles are one of the main vehicles of knowledge translation and evidence communication in the health sciences. Their correct structure and style alone are no longer enough to convey a clear understanding of the intended message. Readers must be able to understand the very essence of the article message. That is the purpose of this book. *Writing, Reading, and Understanding in Modern Health Sciences: Medical Articles and Other Forms of Communication* will help the authors of medical articles communicate more effectively in today's practice and health research environment. It explores the most effective practices for communicating using three main medical literature formats through scientific articles, articles where the subject is not based on the practice of the scientific method, and business reports. Describing how to think beyond the prevailing IMRAD article format, this book focuses on the nature, content, domains of thought, and meanings of medical articles. The ideas and underlying propositions in this book are complementary to specific requirements appropriate for each type of medical journal. After reading this book, you will better understand how to write what is considered the most important type of medical article, the research-based medical article. How to write an evidence-based argumentative medical article. The challenges of clinical case reporting. The general framework of medical and research ethics. Classification of medical articles and their underlying studies from the causal standpoint. Supplying you with the understanding required to write more effective medical articles, the book includes details about essay-type articles, research-based articles, thesis as introduction sections, definitions as part of the material and methods sections, modern argumentation and critical thinking, underlying results and their discussion and conclusions about them.
