Criterion using Simulink Model, Power system stability is a term applied to alternating current electric power systems denoting a condition in which the various synchronous machines of the system remain in synchronism or in step with each other Conversely instability denotes a condition involving loss of synchronism or falling out of step Occurrence of a fault in a power system causes transients To stabilize the system load flow analysis is done Actually in practice the fault generally occurs in the load side As we controlling load side which will lead to complex problem in order to avoid that we are controlling the generator side A MATLAB simulation has been carried out to demonstrate the performance of the three

Shenkman,2006-01-16 Every now and then a good book comes along and quite rightfully makes itself a distinguished place among the existing books of the electric power engineering literature This book by Professor Arie L. Shenkman is one of them Today there are many excellent textbooks dealing with topics in power systems Some of them are considered to be classics However many of them do not particularly address nor concentrate on topics dealing with transient analysis of electrical power systems Many of the fundamental facts concerning the transient behavior of electric circuits were well explored by Steinmetz and other early pioneers of electrical power engineering Among others *Electrical Transients in Power Systems* by Allan Greenwood is worth mentioning Even though basic knowledge of transients may not have advanced in recent years at the same rate as before there has been a tremendous proliferation in the techniques used to study transients The application of computers to the study of transient phenomena has increased both the knowledge as well as the accuracy of calculations Furthermore the importance of transients in power systems is receiving more and more attention in recent years as a result of various blackouts brownouts and recent collapses of some large power systems in the United States and other parts of the world As electric power consumption grows exponentially due to increasing population modernization and industrialization of the so called third world this topic will be even more important in the future than it is at the present time
