Olson, Gustav Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong

Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception *Psychology* ,1928 *The Psychology of Audience Deception* John Louis Kaestner,1935 [The Only Study Guide You'll Ever Need](#) Jade Bowler,2021-08-05 We've all been there a new school year starts and there's 8 months till your exams that's plenty of time right Then there's 6 months 3 months 1 month and oh now there's 2 weeks left and you haven't started studying What happens next is a panic induced mayhem of highlighting everything in the textbook without even questioning if it's actually helpful But I'm here to help you change this In [The Only Study Guide You'll Ever Need](#) I'll cover a range of different topics including How to get started and pick up that pen Learning techniques that actually work hello science of memory The dos and don'ts of timetabling And combatting fear of failure perfectionism exam stress and so much more As a fellow student now at university I definitely don't have a PhD in Exam Etiquette but this is the book younger me needed All I wanted was one place that had a variety of tried and tested methods with reassurance from someone who had recently been through the education system [The Only Study Guide You'll Ever Need](#) is just that and I have collected the best techniques and tools I wish I'd known earlier to help you get through your studies and smash your exams Jade x *Hawes Guide to Successful Studying* Gene R. Slight Trick of the Mind Mitch Cullin, 1907 The basis for the Major Motion Picture Mr Holmes starring Ian McKellen and Laura Linney and directed by Bill Condon. It is 1947 and the long retired Sherlock Holmes now 93 lives in a remote Sussex farmhouse with his housekeeper and her young son. He tends to his bees, writes in his journal and grapples with the diminishing powers of his mind. But in the twilight of his life as people continue to look to him for answers, Holmes revisits a case that may provide him with answers of his own to questions he didn't even know he was asking about life, about love and about the limits of the mind's ability to know. A novel of exceptional grace and literary sensitivity. *A Slight Trick of the Mind* is a brilliant imagining of our greatest fictional detective and a stunning inquiry into the mysteries of human connection.
