Epidemiology Mark Woodward, 1999-05-25 Epidemiology is a subject of growing importance as witnessed by its role in the description and prediction of the impact of new diseases such as AIDS and new variant CJD Epidemiology Study Design and Data Analysis covers the whole spectrum of standard analytical techniques used in epidemiology from descriptive techniques in report writing to model diagnostics from generalized linear models The author discusses the advantages disadvantages and alternatives to case control cohort and intervention studies and details such crucial concepts as incidence prevalence confounding and interaction Many exercises are provided based on real epidemiological data sets collected from all over the world The data sets are also available on an associated web site Epidemiology Study Design and Data Analysis will be an invaluable textbook for statistics and medical students studying epidemiology and a standard reference for practicing epidemiologists

R Companion to Epidemiology: Study Design and Data Analysis Ajith R, 2025-06-23 R Companion to Epidemiology Study Design and Data Analysis is a companion volume to the classic textbook by Mark Woodward Epidemiology Study Design and Data Analysis Third Edition It aims to equip the reader with sufficient knowledge to use R for practising epidemiology Towards this aim it reworks the examples in the textbook presenting the code followed by an explanation and its result Key Features Almost all of the numerical examples in the textbook are reworked in R R code is introduced in small portions and explained thoroughly Complexity of introduced code is increased only gradually More than 300 commands spanning more than 40 libraries are introduced The book is intended primarily to be used as a supplement to the textbook by undergraduate and graduate students in the fields of epidemiology and statistics It will also serve practitioners and researchers in epidemiology who want to learn R for use in their work

Epidemiological Research: Terms and Concepts O. S. Miettinen, 2011-04-22 The book is organized so as to address in separate sections first the preparatory topics of medicine clinical and epidemiological science in general and statistics mathematical then topics of epidemiological research proper and finally topics of meta epidemiological clinical research In those two main sections a further grouping is based on the distinction between objects and methods of study In this framework the particular topics are addressed both descriptively and quasi prescriptively commonly with a number of explicatory annotations This book is intended to serve as a handbook for whomever is in whatever way concerned with epidemiological or meta epidemiological clinical research But besides this it is also intended to serve as a textbook for students in introductory courses on epidemiological research to which end there is a suggested hierarchy of the concepts
