The Mathematics of Darwin's Legacy Fabio A. C. C.

Chalub, José Francisco Rodrigues, 2011-06-24 The book presents a general overview of mathematical models in the context of evolution It covers a wide range of topics such as population genetics population dynamics speciation adaptive dynamics game theory kin selection and stochastic processes Written by leading scientists working at the interface between evolutionary biology and mathematics the book is the outcome of a conference commemorating Charles Darwin's 200th birthday and the 150th anniversary of the first publication of his book On the origin of species Its chapters vary in format between general introductory and state of the art research texts in biomathematics in this way addressing both students and researchers in mathematics biology and related fields Mathematicians looking for new problems as well as biologists looking for rigorous description of population dynamics will find this book fundamental

Advances in Dynamic Games Pierre

Cardaliaguet, Ross Cressman, 2012-09-13 This book focuses on various aspects of dynamic game theory presenting state of the art research and serving as a testament to the vitality and growth of the field of dynamic games and their applications. Its contributions written by experts in their respective disciplines are outgrowths of presentations originally given at the 14th International Symposium of Dynamic Games and Applications held in Banff. Advances in Dynamic Games covers a variety of topics ranging from evolutionary games theoretical developments in game theory and algorithmic methods to applications examples and analysis in fields as varied as mathematical biology environmental management finance and economics engineering guidance and control and social interaction. Featured throughout are valuable tools and resources for researchers practitioners and graduate students interested in dynamic games and their applications to mathematics engineering economics and management science.

Developments in Sustainable Geomaterials and Environmental Geotechnics Kai Yao, Mei Zhenyu, Julius Komba, 2021-07-17 The current trends in Geotechnical Engineering are moving towards sustainable design and construction. Studies presented in this volume present recent research findings and critically review the existing literature related to assessment of sustainable geomaterials and environmental geotechnics. Special emphasis is given to the material characterization on industry by product or newly developed sustainable materials in geotechnical engineering or pavement engineering. This volume is based on contributions to the 6th GeoChina International Conference on Civil Transportation Infrastructures From Engineering to Smart Green Life Cycle Solutions Nanchang China 2021.

Evolutionary Games in Space Natalie Kalev-Kronik, 2006 *Applications of Game Theory* Ram Kumar Mishra, Suresh Deman, Jayasree Raveendran, 2014 People are increasingly becoming interested in game theory because it provides a way of elucidating the logical difficulty of a phenomenon and substantiates various alternative courses of decisions and actions. With contributions by experts from across the globe the select papers in this compendium deal with applications of game theory in the context of R investments in innovative projects two person stochastic games where each state has a skew symmetric payoff matrix study of voting as a decision procedure by committees in firms and game theory application in wireless communication problems and in the context of an interacting colony of bacteria. This handy volume encompasses advanced research in the field of game theory with novel application domains.

Evolutionary Games and Population Dynamics Josef Hofbauer,Karl Sigmund,1998 Every form of behaviour is shaped by trial and error Such stepwise adaptation can occur through individual learning or through natural selection the basis of evolution Since the work of Maynard Smith and others it has been realised how game theory can model this process Evolutionary game theory replaces the static solutions of classical game theory by a dynamical approach centred not on the concept of rational players but on the population dynamics of behavioural programmes In this book the authors investigate the nonlinear dynamics of the self regulation of social and economic behaviour and of the closely related interactions between species in ecological communities Replicator equations describe how successful strategies spread and thereby create new conditions which can alter the basis of their success i e to enable us to understand the strategic and genetic foundations of the endless chronicle of invasions and extinctions which punctuate evolution In short evolutionary game theory describes when to escalate a conflict how to elicit cooperation why to expect a balance of the sexes and how to understand natural selection in mathematical terms *Evolution and Path Dependence in Economic Ideas* Pierre Garrouste,Stavros Ioannides,European Association for Evolutionary Political Economy,2001 Since the 1980s there has been a renewed interest in attempts to introduce a sense of history into economic literature In this book the authors argue that it is not possible to explain a state of the world without first analysing the processes that lead to that state The contributions collected in this volume share a critical stance towards the timelessness and a historical theorizing of mainstream economics Past states in the development of an economic process set the range of possibilities for future development and can be used to construct theories based on the irreversibility of economic time Many of these notable contributors argue that the study of the history of economic thought is important in two ways Firstly because it provides important insights into the ways that economists of the past attempted to address the problems of history and secondly because it helps us to understand the present state of economics as being itself the outcome of a path dependent process Evolutionary economists economic theorists and historians as well as economists interested in the evolution of economic and other social institutions will find this challenging collection of papers essential reading **Science** ,2009
