The Monumental Challenge of Preservation Michele Valerie Cloonan, 2023-08-15 The enormous task of preserving the world's heritage in the face of war natural disaster vandalism neglect and technical obsolescence The monuments movable immovable tangible and intangible of the world's shared cultural heritage are at risk War terrorism natural disaster vandalism and neglect make the work of preservation a greater challenge than it has been since World War II In *The Monumental Challenge of Preservation* Michele Cloonan makes the case that at this critical juncture we must consider preservation in the broadest possible contexts Preservation requires the efforts of an increasing number of stakeholders In order to explore the cultural political technological economic and ethical dimensions of preservation Cloonan examines particular monuments and their preservation dilemmas The massive Bamiyan Buddhas blown up by the Taliban in 2001 are still the subject of debates over how or whether to preserve what remains and the U S National Park Service has undertaken the complex task of preserving the symbolic and often ephemeral objects that visitors leave at the Vietnam Veterans Memorial to take just two of the many examples described in the book Cloonan also considers the ongoing genocide and cultural genocide in Syria the challenges of

preserving our digital heritage the dynamic between original and copy efforts to preserve the papers and architectural fragments of the architect Louis Sullivan and the possibility of sustainable preservation In the end Cloonan suggests we are what we preserve and don't preserve Every day we make preservation decisions individually and collectively that have longer term ramifications than we might expect **Transformative Objects and the Aesthetics of Play** Lynn M.

timely examination of the attachments we form to objects and how they might be used to reduce waste Rampant consumerism has inundated our planet with pollution and waste Yet attempts to create environmentally friendly forms of consumption are often co-opted by corporations looking to sell us more stuff In *Things Worth Keeping* Christine Harold

investigates the attachments we form to the objects we buy keep and discard and explores how these attachments might be marshaled to create less wasteful practices and balance our consumerist and ecological impulses Although all economies produce waste no system generates as much or has become so adept at hiding its excesses as today's mode of global capitalism This book suggests that managing the material excesses of our lives as consumers requires us to build on rather than reject our desire for and attraction to objects Increasing environmental awareness on its own will be ineffective at reversing ecological devastation Harold argues unless it is coupled with a more thorough understanding of how and why we love the things that imbue our lives with pleasure meaning and utility From Marie Kondo's method for decluttering that asks whether the things in our lives spark joy to the advent of emotionally durable design which seeks to reduce consumption and waste by increasing the meaningfulness of the relationship between user and product Harold explores how consumer psychology and empathetic design can transform our perception of consumer products from disposable to interconnected An urgent call for rethinking consumerism Things Worth Keeping shows that by recognizing our responsibility for the things we produce we can become better stewards of the planet

What Is Intelligence? Blaise Aguera y Arcas, 2025-09-23 What intelligence really is and how AI's emergence is a natural consequence of evolution It has come as a shock to some AI researchers that a large neural net that predicts next words seems to produce a system with general intelligence Yet this is consistent with a long held view among some neuroscientists that the brain evolved precisely to predict the future the

predictive brain hypothesis In What Is Intelligence Blaise Ag arca y Arcas takes up this idea that prediction is fundamental not only to intelligence and the brain but to life itself and explores the wide ranging implications These include radical new perspectives on the computational properties of living systems the evolutionary and social origins of intelligence the relationship between models and reality entropy and the nature of time the meaning of free will the problem of consciousness and the ethics of machine intelligence The book offers a unified picture of intelligence from molecules to organisms societies and AI drawing from a wide array of literature in many fields including computer science and machine learning biology physics and neuroscience It also adds recent and novel findings from the author his research team and colleagues Combining technical rigor and deep up to the minute knowledge about AI development the natural sciences especially neuroscience and philosophical literacy What Is Intelligence argues quite against the grain that certain modern AI systems do indeed have a claim to intelligence consciousness and free will
