The Evolution of Power Geerat Vermeij, 2023-11-14 A sweeping new account of the role of power in the evolution of all life on Earth Power has many dimensions from individual

attributes such as strength and speed to the collective advantages of groups The Evolution of Power takes readers on a breathtaking journey across history and the natural world revealing how the concept of power unifies a vast range of phenomena in the evolution of life and how natural selection has placed humanity and the planet itself on a trajectory of ever increasing power Drawing on evidence from fossils living organisms and contemporary society Geerat Vermeij documents increases in power at all scales from body size locomotor performance and the use of force in competition to efficiency in production and consumption within ecosystems He shows how power which he defines as the rate at which organisms acquire and apply energy is tied to the emergence of cooperation and how the modern economy which for the first time has established a monopoly over the biosphere by a single species is a continuation of evolutionary trends stretching back to the dawn of life Vermeij persuasively argues that we can find solutions to the many problems arising from this extreme concentration of power by broadening our exclusively human centered perspective A masterful work by one of today's most innovative and forward thinking naturalists The Evolution of Power offers a new understanding of our place in the grand sweep of evolutionary history **The Neurobiology of Violence** Royal Society (Great Britain). Marine Ecosystem Assessment for the Southern Ocean: Meeting the Challenge for Conserving Earth Ecosystems in the Long Term Monica M. C. Muelbert, 2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e.g. fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and/or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example assessments of change in habitats species and/or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018-2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after [Philosophical Transactions of the Royal Society of London](#), 2008 Each issue of Transactions B is devoted to a specific area of the biological sciences including clinical science All papers are peer reviewed and edited to the highest
