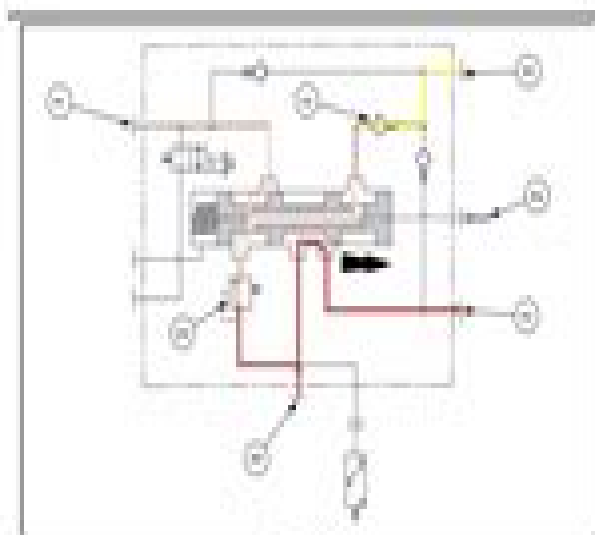

Figure 1-1

Fluid Description

- Master hydraulic pump (transmission) flow to the (PT) port is connected to the output pulley (PT) port.
- Pressure of the (PT) pulley valve is determined by the hydraulic pressure sensor at the (PT) and (PT) ports. These hydraulic pressures are monitored by the transmission controller. The controller calculates a ratio of the two pressures and sends an electronic signal to the solenoid valve at (PT) to move the solenoid valve speed accordingly.
- The (PT) pulley valve speed shift is the right, generating the hydraulic pump flow from the (PT) port.
- The hydraulic pump pressure increases up to the rated value (PT) hydraulic pressure of 1000 kPa (100 psi). When the rated value valve hydraulic flow is delivered to the (PT) port, while hydraulic pressure at the (PT) port is a real constant.
- The (PT) master valve pressure flow is sufficient damping pressure at the input pulley (PT) port, adding a constant contribution to the output valve pressure at the (PT) port.
- The efficiency of pressure at the (PT) and (PT) ports is maximum and the transmission ratio (PT) pressure is greater than (PT).
- The hydraulic flow rate generated by the master valve, generating the valve's transmission to the valve amount to the input pulley (PT) port, adding the valve.
