Robot Manipulators Marco Ceccarelli, 2008-09-01 In this book we have grouped contributions in 28 chapters from several authors all around the world on the several aspects and challenges of research and applications of robots with the aim to show the recent advances and problems that still need to be considered for future improvements of robot success in worldwide frames Each chapter addresses a specific area of modeling design and application of robots but with an eye to give an integrated view of what make a robot a unique modern system for many different uses and future potential applications Main attention has been focused on design issues as thought challenging for improving capabilities and further possibilities of robots for new and old applications as seen from today technologies and research programs Thus great attention has been addressed to control aspects that are strongly evolving also as function of the improvements in robot modeling sensors servo power systems and informatics But even other aspects are considered as of fundamental challenge both in design and use of robots with improved performance and capabilities like for example kinematic design dynamics vision integration

Digital Interaction and Machine Intelligence Cezary Biele, Janusz Kacprzyk, Wiesław Kopeć, Jan W. Owsinski, Andrzej Romanowski, Marcin Sikorski, 2023-07-25 This open access book presents the proceedings of the 10th Machine Intelligence and Digital Interaction Conference Artificial intelligence AI is rapidly affecting more aspects of our lives as a result of significant advancements in its research and the widespread usage of interactive technologies This has led to the birth of several new social phenomena Many nations have been working to comprehend these phenomena and discover solutions for moving artificial intelligence development in the proper direction to benefit individuals and communities at large These efforts necessitate multidisciplinary approaches encompassing not only the scientific fields involved in the creation of artificial intelligence and human computer interaction but also strong collaboration between academics and practitioners Because of this the primary objective of the MIDI conference which was conducted online on December 13 15 2022 is to combine two up until recently distinct disciplines of research artificial intelligence and human technology interaction

Much has been said and written about Japan s manufacturing prowess Most of the comment comes from people who are merely visitors to the country and can be best classified as observers looking in from the outside Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists Neither of these limitations apply to John Hartley who has been resident in Japan for the past five years He understands the culture can speak the language and has extensive contacts at the highest level Therefore he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology This he has been

doing on a regular basis to IFS magazines The Industrial Robot Assembly Automation Sensor Review and The FMS Magazine
 Most of the material in this book is from John Hartley s pen and represents his most significant contributions on flexible
 automation in Japan to these journals over the last three years It is augmented with a few other articles written by leading
