**Handbook of Applied Hydrologic and Water Resources Engineering** Raveendra Kumar Rai, Chandra Shekhar Prasad Ojha, Vijay P. Singh, 2025-02-26 The Handbook of Applied Hydrologic and Water Resources Engineering examines the planning and design of water supply systems flood control works drought mitigation measures navigation facilities and hydraulic structures as well as feasibility and environmental impact studies for various water related projects It is based on the experience gained through consultancy in dealing with various water resources issues and problems teaching and research It serves as a useful resource for graduate students and faculty members in civil engineering agricultural engineering and water resources engineering as well as practicing engineers working in civil environmental and agricultural fields

*Reuse of water in agricultural systems* van Opstal, J.; Droogers, P.; Kaune, A., Many irrigation technologies labelled as potentially water saving actually often fail to deliver expected water savings and can even increase water use by farmers benefiting crop production

but failing to effectively reallocate water A key reason is the common oversight of return flows and water reuse in irrigation systems This guidance document investigates water reuse rates in irrigation systems compiling a database from a literature review that finds a lack of data information and understanding of water reuse To better assess and manage these flows the document introduces the Follow the Water approach which was developed to track water movement within and between irrigation systems and blocks The accompanying Follow the Water tool offers a practical method for initial analysis of intervention impacts and serves as a valuable resource for training and education The study s main recommendation is to apply the Follow the Water approach when planning irrigation technology interventions ensuring a more accurate understanding of water dynamics and avoiding unintended increases in consumption This shift in assessment can support more realistic and effective strategies for achieving water savings in agriculture

**Field guide to improve crop water productivity in small-scale agriculture** Food and Agriculture Organization of the United Nations ,2020-04-01 By 2050 the world s population will reach 9.1 billion which requires an increase of food production by 70 percent compared to 2005 FAO 2018 Nearly all the increase will occur in developing countries where agriculture plays a major role to provide employment income and to improve food security One of the major challenges of increasing food supply is the limited water resources Agriculture as the driver of freshwater exploitation has therefore to be transformed into more resource efficient production FAO 2003 The world s limited freshwater resources are potentially threatened by the expansion of agriculture Increasing the potential output per amount of water used is an appropriate practice to improve production efficiency while protecting water resources Therefore increasing the productivity of agricultural water use in a sustainable manner is essential to ultimately sustain the social and economic conditions of livelihoods Crop water productivity has grown into one of the major approaches to cope with water scarcity and advance crop water relation The number of conceptual frameworks and implications is ample but there is always a growing need to review the step by step approach beyond In this Field guide practical pathways are presented to provide a comprehensive approach for assessing and improving crop water productivity in small scale agriculture The Field guide draws lessons learned in three countries Burkina Faso Morocco and Uganda within the framework of FAO project Strengthening Agricultural Water Efficiency and Productivity at the African and Global Level funded by Swiss Agency for Development and Cooperation SDC
