pump deterioration resulting in a change in maximum fuel delivery volume and retarding the injection timing The fuel
injection pump manufacturer has experienced premature wear problems with their pumps when operated on low viscosity
fuels such as JP 8 in cold climates and now offers an arctic fuel injection pump designed to operate with lower viscosity fuels
This program sought to determine if that pump is superior to the standard pump in preventing premature wear with JP 8 fuel
Results of 200 hour test indicate that the arctic pump performed better than the standard pump in injection timing change
