Molecular Taxonomy of Ascomycetes and Basidiomycetes: Unveiling Fungal Diversity and Evolution

Sinang Hongsanan,Ahmed M. Abdel-Azeem ,Steven Miller,2025-11-24 Accurate identification and classification of fungi in Ascomycetes and Basidiomycetes are crucial due to their significant roles in ecosystems ranging from organic matter decomposition to symbiotic relationships with plants Additionally some fungi can cause diseases thus it is important to provide accurate identification to contribute to developing innovative solutions safeguarding human health and agricultural systems However Ascomycetes and Basidiomycetes show considerable diversity in appearance behavior and ecological roles posing challenges for traditional morphology based identification especially when dealing with cryptic or morphologically similar species This misclassification hinders our understanding of fungal diversity and blocks progress in various fields Molecular techniques utilizing DNA sequences as unique identifiers offer a promising solution enabling differentiation of closely related fungal species often indistinguishable through microscopy These molecular approaches not only reveal hidden diversity but also facilitate the exploration of intricate evolutionary relationships within fungal groups Despite previous research many questions regarding fungal species relationships adaptations and evolution remain unanswered Hence it is crucial to continue discovering new fungal species resolving ambiguities within specific fungal groups and studying their

interactions with other organisms This research topic aims to advance the use of molecular techniques for the taxonomy of Ascomycetes and Basidiomycetes By leveraging DNA sequencing and other molecular tools the goal is to address specific questions related to fungal diversity evolutionary relationships and species identification The research will test hypotheses concerning the genetic diversity and phylogenetic relationships within these fungal groups aiming to uncover new species and clarify existing taxonomic ambiguities To gather further insights into the molecular taxonomy of Ascomycetes and Basidiomycetes we welcome effective review and original research articles addressing but not limited to the following themes

Molecular identification and classification of fungal species
Phylogenetic studies revealing evolutionary relationships
Discovery and description of new fungal taxa
Genetic diversity and population structure analyses
Ecological roles and interactions of fungi with other organisms
Advances in molecular techniques and methodologies for fungal taxonomy
Revisions and updates to fungal nomenclature and classification systems

Global status of salt-affected soils FAO,2024-12-10 Salt affected soils characterized by high soluble salts saline or exchangeable sodium sodic impact plant growth and occur globally especially in arid and coastal regions Salinization stems from natural causes e g climate change sea level rise and human actions e g poor irrigation practices excessive water use FAO s Global Map of Salt Affected Soils reveals that over 1 381 million hectares 10 7 percent of global land are affected with Australia Argentina and Kazakhstan among the most impacted countries Increasing

aridity and water demand amplify soil degradation risks particularly in developing regions Climate change and water scarcity threaten agricultural productivity with substantial crop yield losses observed in saline areas Halophytes and salt tolerant crops provide a foundation for saline agriculture yet many salt affected soils remain unprotected and inadequately regulated FAO s INSAS International Network of Salt Affected Soils underscores the need for updated data harmonized salinity measurements and sustainable management practices with enhanced training and policy frameworks Mitigation strategies like improved drainage soil amendments and the cultivation of salt tolerant plants are recommended Key recommendations include scaling sustainable practices investing in salt tolerant crop markets improving data collection and water quality monitoring conserving ecosystems and fostering cross sector collaboration Such integrated efforts aim to boost food production and resilience in affected regions while protecting vital ecosystems
