**Renewable Energy** Stephen Peake,2018 This international edition of renewable energy is the ideal introduction to the subject The interdisciplinary approach brings together economic social environmental and policy issues to give a comprehensive assessment of this multi faceted area Publisher description **Rethinking the Environmental Impacts of Renewable Energy** Alexander Clarke,2016-08-25 Renewable energy is important as a substitute for finite fossil fuels and inflexible nuclear power and could conceivably power the world However this is challenging as the world is currently 80% dependent on fossil fuels and renewable sources produce only about 15% of total energy Conversion technologies for use with many of the eight different primary sources of renewable energy are only just emerging as viable technologies While renewable energy sources will not run out and their use involves little or no release of carbon dioxide or ionising wastes they do have local environmental impacts of their own This book analyses the nature of environmental impacts from renewable sources A novel method of assessing impacts is explored based on a set of parameters centred on how diffuse or

concentrated the energy flow is The approach that is developed will inform engineers designers policy makers and planners as well as researchers in the area

**Introduction to Biomass Energy Conversions** Sergio Capareda,2013-07-09 The potential that biomass energy has to supplement traditional fuels and reduce greenhouse gas emissions has put it front and center in the plan to replace fossil based fuels with renewable fuels While much has been written about biomass conversions no single textbook contains all the information needed to teach a biomass conversion course until [Recent Developments in Bioenergy Research](#) Vijai G. Gupta,Helen Treichel,Ramesh Chander Kuhad,Susana Rodriguez-Couto,2020-06-21 Recent Developments in Bioenergy Research reviews all these topics reports recent research findings and presents potential solutions to challenging issues The book consolidates the most recent research on the bio technologies concepts and commercial developments that are currently in progress on different types of widely used biofuels and integrated biorefineries across biochemistry biotechnology biochemical engineering and microbiology Chapters include very recent emerging topics such as non ionic and ionic liquids surfactants for enhancement of lignocellulose enzymatic hydrolysis and lignocellulose biomass as a rich source of bio ionic liquids The book is a useful source of information for those working in the area of industrial wastewater treatment and microbial fuel cells but is also a great resource for senior undergraduate and graduate students researchers professionals biochemical engineers and other interested individuals groups working in the field of biofuel bioenergy Provides unique information on biomass based biofuels for fundamental and applied research Outlines research advancements in the areas of bio hydrogen bioethanol bio methane and biorefineries Includes emerging topics on biomass including wastes characterization and its uses as a resource for environmental bioremediation and bioenergy Reviews enzyme engineering for biomass to bioproducts and biochemicals lipids bio oil Focuses on biological biochemical routes as these options have the greatest potential to be the most cost effective methods for biofuel bioenergy production

**At the Margins of Planning** Stephen A. Jay,2017-11-30 Offshore wind farms are being developed on a major scale around the UK coastline as part of the drive to increase renewable energy production This presents a new departure for the renewables sector Having fewer physical constraints than on land they avoid the planning system which currently ends at low water mark However planning authorities and the communities they represent are deeply concerned about the consequences of offshore wind farms along their coastal zones This book presents an empirical investigation into the attitudes of local planning authorities into the development of offshore wind farms examining these findings in light of wider debates about the use and management of the seas and the potential contribution of the mechanisms of planning The book also raises questions about the geographical limits of planning and how to go about establishing a form of spatial planning to cover the marine environment

**Routledge Handbook of Arctic Security** Gunhild Hoogensen Gjørsv, Marc Lanteigne, Horatio Sam-Aggrey, 2020-01-09. The Routledge Handbook of Arctic Security offers a comprehensive examination of security in the region encompassing both state-based and militarized notions of security as well as broader security perspectives reflecting debates about changes in climate, environment, economies and societies. Since the turn of the century, the Arctic has increasingly been in the global spotlight, resulting in the often invoked idea of Arctic exceptionalism being questioned. At the same time, the unconventional political power which the Arctic's Indigenous peoples hold calls into question conventional ideas about geopolitics and security. This handbook examines security in this region, revealing contestations and complementarities between narrower state-based and or militarized notions of security and broader security perspectives reflecting concerns and debates about changes in climate, environment, economies and societies. The volume is split into five thematic parts: Theorizing Arctic Security, The Arctic Powers, Security in the Arctic through Governance, Non-Arctic States, Regional and International Organizations, People, States and Security. This book will be of great interest to students of Arctic politics, global governance, geography, security studies and International Relations.
