Conservation of architecture and the conversation of Modern architecture in particular has assumed new challenges. Rather than attempting to return a Modern building to its resumed original state, the challenge of these proceedings is to revalue the essence of the manifold manifestations of Modern architecture and redefine its meanings in a rapidly changing world of digital revolution, worldwide mobility, and environmental awareness. This volume aims to provide a variety of platforms for the exchange of ideas and experience. A large international group of architects, historians, scholars, preservationists, and other parties involved in the processes of preserving, renovating, and transforming Modern buildings has been invited to investigate the paradox of the Modern monument and to reflect on the manifold dilemmas of change and continuity. The general theme is elaborated through five sub-themes. The sub-theme Change and Continuity addresses the tensions between change and continuity from a historical/theoretical perspective. Restructuring Cities and Landscapes focuses on the larger scale of city and landscape, while Shifts in Programme and Flexibility draws attention to the scale of the building or building complex and questions limits of re-use and flexibility. The fourth sub-theme deals with education, and the fifth sub-theme Progress

Technology and Sustainability considers specific issues of techniques and materials.      *Eero Saarinen* Eero Saarinen, Rupert Spade, 1971      *Michigan Modern* Amy Arnold, Brian Conway, 2016-10-04. *Michigan Modern: Design That Shaped America* is an impressive collection of important essays touching on all aspects of Michigan's architecture and design heritage. The Great Lakes State has always been known for its contributions to twentieth-century manufacturing, but it's only beginning to receive wide attention for its contributions to Modern design and architecture. Arnold, project manager for *Michigan Modern*, have curated nearly thirty essays and interviews from a number of prominent architects, academics, architectural historians, journalists, and designers, including historian Alan Hess, designers Mira Nakashima, Ruth Adler Schnee, and Todd Oldham, and architect Gunnar Birkerts.

**Alloys** Marin R. Sullivan,2022-03-22 A new look at the interrelationship of architecture and sculpture during one of the richest periods of American modern design Alloys looks at a unique period of synergy and exchange in the postwar United States when sculpture profoundly shaped architecture and vice versa Leading architects such as Gordon Bunshaft and Eero Saarinen turned to sculptors including Harry Bertoia Alexander Calder Richard Lippold and Isamu Noguchi to produce site determined large scale sculptures tailored for their buildings highly visible and well traversed threshold spaces The parameters of these spaces atriums lobbies plazas and entryways led to various designs like sculptural walls ceilings and screens that not only embraced new industrial materials and processes but also demonstrated art s ability to merge with lived architectural spaces Marin Sullivan argues that these sculptural commissions represent an alternate history of midcentury American art Rather than singular masterworks by lone geniuses some of the era s most notable spaces Philip Johnson s Four Seasons Restaurant in Mies van der Rohe s Seagram Building Max Abramovitz s Philharmonic Hall at Lincoln Center and Pietro Belluschi and Walter Gropius s Pan Am Building would be diminished without the collaborative efforts of architects and artists At the same time the artistic creations within these spaces could not exist anywhere else Sullivan shows that the principle of synergy provides an ideal framework to assess this pronounced relationship between sculpture and architecture She also explores the afterlives of these postwar commissions in the decades since their construction A fresh consideration of sculpture s relationship to architectural design and functionality following World War II Alloys highlights the affinities between the two fields and the ways their connections remain with us today **Architecture, Shaping the Future** ,1990 [Airport Aura](#) Lilia Mironov,2020-02-26 Throughout the 20th century and into the 21st the emergence of airports as gateways for their cities has turned into one of the most important architectural undertakings Ever since the first manned flight by the Brothers Orville and Wilbur Wright on December 17th 1903 utilitarian sheds next to landing strips on

cow pastures evolved into a completely new building type over the next few decades into places of Modernism as envisioned by Le Corbusier and Frank Lloyd Wright who themselves never built an airport to eventually turn into icons of cultural identity progress and prosperity Many of these airports have become architectural branding devices of their respective cities regions and countries created by some of the most notable contemporary architects This interdisciplinary cultural study deals with the historical formation and transformation of the architectural typology of airports under the aspect of spatial theories This includes the shift from early spaces of transportation such as train stations the synesthetic effect of travel and mobility and the effects of material innovations on the development occupation and use of such spaces The changing uses from mere utilitarian transportation spaces to ones centered on the spectacular culture of late capitalism consumption and identity formation in a rapidly changing global culture are analyzed with examples both from architectural and philosophical points of view The future of airport architecture and design very much looks like the original idea of the Crystal Palace and Parisian Arcades to provide a stage for consumption social theatre and art exhibition *Jet Age Aesthetic* Vanessa R. Schwartz, 2020-02-21

A stunning look at the profound impact of the jet plane on the mid century aesthetic from Disneyland to Life magazine Vanessa R Schwartz engagingly presents the jet plane s power to define a new age at a critical moment in the mid 20th century arguing that the craft s speed and smooth ride allowed people to imagine themselves living in the future Exploring realms as diverse as airport architecture theme park design film and photography Schwartz argues that the jet created an aesthetic that circulated on the ground below Visual and media culture including Eero Saarinen s airports David Bailey s photographs of the jet set and Ernst Haas s experiments in color photojournalism glamorized the imagery of motion Drawing on unprecedented access to the archives of The Walt Disney Studios Schwartz also examines the period s most successful example of fluid motion meeting media culture Disneyland The park s dedication to people moving defined Walt Disney s vision shaping the very identity of the place The jet age aesthetic laid the groundwork for our contemporary media culture in which motion is so fluid that we can surf the internet while going nowhere at all *Common Ground* ,2007
