Kahraman,2019-10-22 System on a Chip SoC technology which has evolved in recent years is developed from different devices A processor several memory and peripheral components are located on a single chip to form today s high performance SoCs with hundreds of IP blocks IP cores are validated design blocks used as part of complex digital designs Those designs are utilizing a hardware description language like VHDL or Verilog In this way time and cost of launching the product are reduced Thanks to SoC the features of computers were able to be reduced to the miniature level

Microcontrollers have the features of computer systems on a single chip They are used to collect process and manipulate data in complex projects The complexity of microcontrollers has increased to provide better performance and flexibility to meet customer requirements However it must be able to adapt to operational changes The hardware of a microcontroller can not be changed afterward If subsequent changes are nevertheless necessary these are associated with high additional costs Reconfigurable devices such as FPGAs can reconfigure the hardware to design develop and deploy high performance digital systems With the power of a SoC combined with the flexibility of an FPGA the MC8051 IP Core proves to be a great alternative to purely microcontroller based systems **Robot Vision** Ales Ude,2010-03-01 The purpose of robot vision is to
