Embedded Computer Vision ,2008   **Embedded Computer Vision** Branislav Kisacanin,Shuvra S. Bhattacharyya,Sek Chai,2008-09-26 As a graduate student at Ohio State in the mid 1970s I inherited a unique c puter vision laboratory from the doctoral research of previous students They had designed and built an early frame grabber to deliver digitized color video from a very large electronic video camera on a tripod to a mini computer sic with a huge disk drive about the size of four washing machines They had also signed a binary image array processor and programming language complete with a user s guide to facilitate designing software for this one of a kindprocessor The overall system enabled programmable real time image processing at video rate for many operations I had the whole lab to myself I designed software that detected an object in the eldofview trackeditsmovementsinrealtime anddisplayedarunningdescription of the events in English For example An object has appeared in the upper right corner Itismovingdownandtotheleft Nowtheobjectisgettingcloser The object moved out of sight to the left about like that The algorithms were simple relying on a suf cient image intensity difference to separate the object from the background a plain wall From computer vision papers I had read I knew that vision in general imaging conditions is much more sophisticated But it worked it was great fun and I was hooked   **Graph-Based Methods in Computer Vision: Developments and Applications** Bai, Xiao,Cheng, Jian,Hancock, Edwin,2012-07-31 Computer vision the science and technology of machines that see has been a rapidly developing research area since the mid 1970s It focuses on the understanding of digital input images in many forms including video and 3 D range data Graph Based Methods in Computer Vision Developments and Applications presents a sampling of the research issues related to applying graph based methods in computer vision These methods have been under utilized in the past but use must now be increased because of their ability to naturally and effectively represent image models and data This publication explores current activity and future applications of this fascinating and ground breaking topic
