ABSTRACT

This paper explores the potential implications of embodied conversational agents (ECAs) in healthcare, focusing on the impact of appearance and conversation style on trustworthiness. We conducted a Research through Design investigation of ECAs for supporting women during the periconception period and in pregnancy. The

paper presents the results of a Wizard of Oz study in which two alternative prototypes, a chatbot, and an ECA, were tested in a tertiary hospital by 25 participants. Reflecting on the results we suggest that limited patients' trust in ECAs maybe be beneficial for achieving trustworthy use of these agents in the healthcare context.

Embodied Conversational Agents Embodied Conversational Agents:

Embodied Conversational Agents Justine Cassell, 2000 This book describes research in all aspects of the design implementation and evaluation of embodied conversational agents as well as details of specific working systems Embodied conversational agents are computer generated cartoonlike characters that demonstrate many of the same properties as humans in face to face conversation including the ability to produce and respond to verbal and nonverbal communication They constitute a type of a multimodal interface where the modalities are those natural to human conversation speech facial displays hand gestures and body stance b software agent insofar as they represent the computer in an interaction with a human or represent their human users in a computational environment as avatars for example and c dialogue system where both verbal and nonverbal devices advance and regulate the dialogue between the user and the computer With an embodied conversational agent the visual dimension of interacting with an animated character on a screen plays an intrinsic role Not just pretty pictures the graphics display visual features of conversation in the same way that the face and hands do in face to face conversation among humans This book describes research in all aspects of the design implementation and evaluation of embodied conversational agents as well as details of specific working systems Many of the chapters are written by multidisciplinary teams of psychologists linguists computer scientists artists and researchers in interface design The authors include Elisabeth Andre Norm Badler Gene Ball Justine Cassell Elizabeth Churchill James Lester Dominic Massaro Cliff Nass Sharon Oviatt Isabella Poggi Jeff Rickel and Greg Sanders **From Brows to Trust** Zsófia Ruttkay, Catherine Pelachaud, 2004-09-21 Embodied conversational agents ECAs are autonomous software entities with human like appearance and communication skills These agents can take on a number of different roles for example as an assistant tutor information provider or customer service agent They may also simply represent or entertain a user The precise nature and benefits of different characteristics of ECAs requires careful investigation Questions range from the function of an eyebrow raise to mechanisms for assessing and improving ECA trustworthiness This book will help experts and designers in the specification and development of applications incorporating ECAs Part 1 provides guidelines for evaluation methodologies and the identification of design and evaluation parameters Part 2 demonstrates the importance of considering the user's perspective and interaction experience Part 3 addresses issues in fine tuning design parameters of ECAs and verifying the perceived effect Finally in Part 4 lessons learned from a number of application case studies are presented The book is intended for both ECA researchers in academia and industry and developers and designers interested in applying the technology *Usability Engineering for Embodied Conversational Agents with Older Users* Simon Peter Doolin, 2013 *Usability Design of Embodied Conversational Agents on Handheld Devices* Carl Simmons, 2013 **Affective Embodied Conversational Agents for Natural Interaction** Eva Cerezo, 2008 *Affective Embodied Conversational Agents for Natural Interaction Computational Model of Listener Behavior for Embodied Conversational Agents* Elisabetta Bevacqua, 2010-06-15

During a conversation listeners do not assimilate passively all of the speaker's words they actively participate in the interaction providing information about how they feel and what they think of the speaker's speech. The speaker relies on signals emitted by the listener to know if he is listening or not understanding or not agreeing or not etc. This informs the speaker on the success or failure of the communication and helps him to decide how to carry on with the interaction. In this thesis to refer to signals provided by listeners we adopt the term backchannel proposed by Yngve. We define backchannels as acoustic and non verbal signals provided during the speaker's turn to exchange information about the communicative functions contact perception understanding and attitude. Backchannels are emitted in a non intrusive way that is without interrupting the speaker's speech. Two fundamental characteristics of backchannels are i they can be emitted at different level of intentionality ii they can be reactive deriving from a first process of perception of the speaker's speech or response deriving from a more aware evaluation. A particular form of backchannel is the mimicry of the speaker's behavior. By mimicry we mean the behavior displayed by an individual who does what another person does. This type of behavior has been proven to play quite an important role during conversations. Due to the importance of the listener's behavior in this thesis we propose to implement a model that generates this type of behavior for an Embodied Conversational Agent while interacting with a user. We aim to improve the human machine interaction.

The Handbook on Socially Interactive Agents Birgit Lugrin, Catherine Pelachaud, David Traum, 2022-10-19. The Handbook on Socially Interactive Agents provides a comprehensive overview of the research fields of Embodied Conversational Agents Intelligent Virtual Agents and Social Robotics. Socially Interactive Agents SIAs whether virtually or physically embodied are autonomous agents that are able to perceive an environment including people or other agents reason decide how to interact and express attitudes such as emotions engagement or empathy. They are capable of interacting with people and one another in a socially intelligent manner using multimodal communicative behaviors with the goal to support humans in various domains. Written by international experts in their respective fields the book summarizes research in the many important research communities pertinent for SIAs while discussing current challenges and future directions. The handbook provides easy access to modeling and studying SIAs for researchers and students and aims at further bridging the gap between the research communities involved. In two volumes the book clearly structures the vast body of research. The first volume starts by introducing what is involved in SIAs research in particular research methodologies and ethical implications of developing SIAs. It further examines research on appearance and behavior focusing on multimodality. Finally social cognition for SIAs is investigated using different theoretical models and phenomena such as theory of mind or pro sociality. The second volume starts with perspectives on interaction examined from different angles such as interaction in social space group interaction or long term interaction. It also includes an extensive overview summarizing research and systems of human agent platforms and of some of the major application areas of SIAs such as education aging support autism and games.

Empirical Studies on Embodied

Conversational Agents Jun Xiao,2006 To address these questions I studied user experiences with ECA interfaces and evaluated the ECA style of interaction with respect to user expectation perception behavior and performance I introduce a conceptual framework that offers a holistic view of the design space of ECA systems I also have created a middleware toolkit that facilitates rapid development of application content across different speech and animation platforms *Paired Speech and Gesture Generation in Embodied Conversational Agents* Hao Yan,2000 *Cognitive Aspects of Embodied Conversational Agents* Cameron G. Multimodal Distinctive Behavior for Expressive Embodied Conversational Agents Maurizio Mancini,2008-10-02 Embodied Conversational Agents ECAs are a new type of computer interface which have human like bodies and conversational skills Users interacting with agents will be more engaged and participative if the agents exhibit behaviors which look coherent across different situations and emotional states In the present work we aim at increasing agents believability by looking at two main aspects of the problem an agent must be able to show its emotional state and communicative intentions not only through specific facial expressions gestures etc but also by varying the quality of its movements e g their speed amplitude etc and the choice of the modalities that are used to communicate the agent must maintain a distinctive behavior that is its global behavior tendency has to remain apparent during any communication We have developed a model to solve the two above issues We have evaluated the realism and believability of the resulting agent s behaviors through perceptual tests and application scenario The resulting system is highly extensible and configurable It can also be used as a research tool to study human communication *Design and Evaluation of Embodied Conversational Agents for Educational and Advisory Software* Elisabeth André,2019 □□□ ,1600
