Place a wooden block under the ramp and measure the height of the ramp using a ruler. Place two light gates over the ramp at different locations, attach the light gates to a computer. Place the trolley at the start position and release the trolley without applying a force. The light gates measure the speed and distance, then the computer calculates the acceleration. Repeat at the same height, remove anomalies and calculate a mean. Repeat the method at different heights. Ensure the trolley is placed at the same starting position each time.
