

ExtraSolar Planets – Student Guide

Background Material

Complete the following sections after reviewing the background pages entitled Introduction, Doppler Shift, Center of Mass, and ExtraSolar Planet Detection.

Question 1: Label the positions on the star's orbit with the letters corresponding to the labeled positions of the radial velocity curve. Remember, the radial velocity is positive when the star is moving away from the earth and negative when the star is moving towards the earth.

Question 2: Label the positions on the planet's orbit with the letters corresponding to the labeled positions of the radial velocity curve. Hint: the radial velocity in the plot is still that of the star, so for each of the planet positions determine where the star would be and in which direction it would be moving.

Introductory Notes on Planetary Science Colette Salyk, Kevin W. Lewis, 2020 Planets come in many different sizes and with many different compositions orbiting our Sun and countless other stars Understanding their properties and interactions requires an understanding of a diverse set of sub fields including orbital and atmospheric dynamics geology geophysics and chemistry This textbook provides a physics based tour of introductory planetary science concepts for undergraduate students majoring in astronomy planetary science or related fields It shows how principles and equations learned in introductory physics classes can be applied to study many aspects of planets including dynamics surfaces interiors and atmospheres It also includes chapters on the discovery and characterization of extrasolar planets and the physics of planet formation

Exoplanet Science Strategy National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Space Studies Board, Committee on Exoplanet Science Strategy, 2018-12-17 The past decade has delivered remarkable discoveries in the study of exoplanets Hand in hand with these advances a theoretical understanding of the myriad of processes that dictate the formation and evolution of planets has matured spurred on by the avalanche of unexpected discoveries Appreciation of the factors that make a planet hospitable to life has grown in sophistication as has understanding of the context for biosignatures the remotely detectable aspects of a planet's atmosphere or surface that reveal the presence of life Exoplanet Science Strategy highlights strategic priorities for large coordinated efforts that will support the scientific goals of the broad exoplanet science community This report outlines a strategic plan that will answer lingering questions through a combination of large ambitious community supported efforts and support for diverse creative community driven investigator research **Extrasolar Planets and Astrobiology** Caleb A. Scharf, 2009 This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology No other text currently available applies this level of mathematics and physics while also providing an extensive grounding in key issues of chemistry biology and geophysics With extensive references to the literature and chapter ending exercises this book can be used as the core text for teaching undergraduate or introductory graduate level courses The text will also provide astrobiologists with an indispensable User's Manual when quick reference to key mathematical and physical techniques is

needed A continually updated online component fully cross referenced with the text is also available Foreword by Geoff Marcy **Study and Characterization of Exoplanets** Michael Nielsen, 2014-08-21 The study and characterization of extrasolar planets or exoplanets is an exciting field that brings together different disciplines from astronomy physics and chemistry Several open questions remain in respect to the stability of determining the exoplanet orbital period and temperature The latter study is further complicated by possible variations in the exoplanet surface or atmospheric reflection and emission **Strategy for the Detection and Study of Other Planetary Systems and Extrasolar Planetary Materials** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Planetary and Lunar Exploration, 1990-02-01 This volume addresses a new opportunity in the planetary sciences to extend our exploration outward to discover and study planetary systems that may have formed or are forming around other stars It concludes that a coordinated program of astronomical observation laboratory research theoretical development and understanding of the dynamics and origins of whatever may be found would be a technologically feasible and potentially richly rewarding extension of the study of bodies within the solar system *Exoplanets and Alien Solar Systems* Tahir Yaqoob, 2011 An unprecedented number of planets outside of the solar system have been found with an explosion in the number of discoveries in recent years Find out what has been happening in this rapidly advancing arena of human exploration what these extrasolar planets are like and why some traditional ideas face being thrown out Exoplanet Science Strategy National Academies of Sciences, Engineering, and Medicine (U.S.). Committee on Exoplanet Science Strategy, 2018 The past decade has delivered remarkable discoveries in the study of exoplanets Hand in hand with these advances a theoretical understanding of the myriad of processes that dictate the formation and evolution of planets has matured spurred on by the avalanche of unexpected discoveries Appreciation of the factors that make a planet hospitable to life has grown in sophistication as has understanding of the context for biosignatures the remotely detectable aspects of a planet's atmosphere or surface that reveal the presence of life Exoplanet Science Strategy highlights strategic priorities for large coordinated efforts that will support the scientific goals of the broad exoplanet science community This report outlines a strategic plan that will answer lingering questions through a combination of large ambitious community supported efforts and support for diverse creative community driven investigator research Publisher's description **The New Worlds** Fabienne Casoli, Therese Encrenaz, 2007-04-25 Offering an engaging and complete story of the hunt for new worlds this volume fully details the detection and exploration of extrasolar planets It examines the very wide range of extrasolar planets that have been discovered during the past ten years and looks at what can be learned about such planets by studying the bodies in our own solar system It also discusses the formation of planetary systems the way in which such systems may evolve and the final systems of planets that result In addition the authors demonstrate how life might evolve on an extrasolar planet and how such life might be detected *The Exoplanet Handbook* M. A. C. Perryman, 2014 **Extrasolar Planets**

Hans Deeg, Juan Antonio Belmonte, Antonio Aparicio, 2007-10-18 This 2007 volume presents the lectures from the sixteenth Winter School of the Instituto de Astrofísica de Canarias which was dedicated to extrasolar planets Research into extrasolar planets is one of the most exciting fields of astrophysics and the past decade has seen a research leap from speculations on the existence of planets orbiting other stars to the discovery of around 200 planets to date The book covers a wide range of issues from the state of the art observational techniques used to detect extrasolar planets to the characterizations of these planets and the techniques used in the remote detection of life It also looks at the insights we can gain from our own Solar System and how we can apply them The contributors all of high standing in the field provide a balanced and varied introduction to extrasolar planets for research astronomers and graduate students bridging theoretical developments and observational advances

Extra-Solar Planets Bonnie Steves, Martin Hendry, Andrew C. Cameron, 2019-09-19 Written by internationally renowned scientists at the forefront of the field Extra Solar Planets presents powerful analytical tools and methods for investigating extra solar planetary systems It discusses new theories on planetary migration and resonant capture that elucidate the existence of hot Jupiters It also examines the astrophysical mechanisms required to assemble gas giant planets close to their parent star In addition the expert contributors describe how mathematical tools involving periodicity chaos and resonance are used to study the diversity and stability of observed planetary systems

The Exoplanet Handbook M. A. C. Perryman, 2011 Exoplanet research is one of the most explosive subjects in astronomy today More than 500 exoplanets are now known and groups world wide are actively involved in a broad range of observational and theoretical efforts This book ties together these many avenues of investigation from the perspectives of observation technology and theory to give a comprehensive up to date review of the entire field All areas of exoplanet investigation are covered making it a unique and valuable guide for researchers in astronomy and planetary science including those new to the field It treats the many different techniques now available for exoplanet detection and characterisation the broad range of underlying physics the overlap with related topics in solar system and Earth sciences and the concepts underpinning future developments It emphasises the interconnection between the various fields and provides extensive references to more in depth treatments and reviews
