 Meeting the need for teaching material suitable for students of atmospheric science and courses on atmospheric radiation
 this textbook covers the fundamentals of emission absorption and scattering of electromagnetic radiation from ultraviolet to
 infrared and beyond Much of the contents applies to planetary atmosphere with graded discussions providing a thorough
 treatment of subjects including single scattering by particles at different levels of complexity The discussion of the simple
 multiple scattering theory introduces concepts in more advanced theories such that the more complicated two stream theory
 allows readers to progress beyond the pile of plates theory The authors are physicists teaching at the largest meteorology
 department in the US at Penn State The problems given in the text come from students colleagues and correspondents and
 the figures designed especially for this book facilitate comprehension Ideal for advanced undergraduate and graduate
